Have you found anything further? I tried to see what was listed in IRIS, but it came up with something in the Antarctic (I think).

Thanks,  
Nancy

Let me go back through our notes to get a description of how we did the deployments. There were two deployments. The paper we published was done after the second deployment. I need to review our field notes to give you the details on which stations we used in our paper and why.

Hi Chris,

Compare the SMU1 and SMU3 with AFMOM and LKGPV on the two figures. Having said that, the main issue is were two deployments done in the DFW airport area? If so, that is the answer. Then my next question is whether you have published any discussion on the second deployment?

Thanks,  
Nancy

Nancy -

Can you give one example for me to dig into?

Chris
